Europe Energy Saving Notice

Energy Saving Matters (EuP 2009/125/EC)

Saving electric energy is a key to help protecting the environment. Please turn off all electrical products when they are not in use. To avoid power consumption in idle mode, disconnect all electrical equipment from power when not in use. Thank you!

**DOCUMENT VERSION**

Due to additional product features and/or enhancements, an updated version of this document may be available online.

Please check [www.adj.com](http://www.adj.com) for the latest revision/update of this manual before beginning installation and/or programming.

# GENERAL INFORMATION

## INTRODUCTION

Please read and understand the instructions in this manual carefully and thoroughly before attempting to operate this device. These instructions contain important safety and use information.

**This product is intended for use by professionally trained personnel only, and is not suitable for private use.**

## Unpacking

Every device has been thoroughly tested and has been shipped in perfect operating condition. Carefully check the shipping carton for damage that may have occurred during shipping. If the carton is damaged, carefully inspect the device for damage, and be sure all accessories necessary to install and operate the device have arrived intact. In the event damage has been found or parts are missing, please contact our customer support team for further instructions. Please do not return this device to your dealer without first contacting customer support. Please do not discard the shipping carton in the trash. Please recycle whenever possible.

**Parts:** To purchase parts online visit:

**EU:** [https://www.adj.eu/terms\\_and\\_conditions](https://www.adj.eu/terms_and_conditions)

It is strongly recommended to power the fixture down completely when not in use. Doing so will reduce wear on the fixture due to sustained or extended operational periods, thereby maximizing its operational lifespan.

# FEATURES

The H2O TWO is a stimulating lighting fixture designed to bring a dynamic water-like effect to your lighting display. With a bright 120-Watt cool white LED source and 5 Dichroic colors, this fixture creates a mesmerizing simulated water effect that can be projected onto walls, ceilings, or floors. The H2O Two can be used with or without fog and is great for mood or background lighting.

This fixture is equipped with two DMX channel modes and may be controlled via DMX, the included IR wireless remote or from the built-in programs, giving you complete control over your lighting setup. The digital DMX display with a 4-button menu makes navigation easy, while the 0-100% dimming (via DMX) manual adjustable zoom and focusing lens allow you to fine-tune the lighting to your exact specifications.

Built to last, the H2O Two features long-life LED source rating of 50,000 hours, and multi-voltage operation (AC 120-240V 50/60Hz). The fixture is fan-cooled and includes a safety loop on the rear panel, ensuring reliable and safe operation. With a power consumption of only 128W (120V) or 125W (220V), the H2O TWO can run all night without the need for a duty cycle.

## Key Features

- Color Wheel with 5 Dichroic Colors Plus White
- 37° and Optional 27° Manually Adjustable Focus
- Manual Focus of Lens for Blurry Effects
- 0.6Hz to 7.5Hz Strobe Rate
- 3 Built-In Programs
- Primary / Secondary Mode
- Fan Cooled

## INCLUDED ITEMS

- 1x 6ft (1.83m), 3x18AWG, Indoor Power locking to Edison power cable (U.S.)
- 1x UC-IR (IR Remote)

# SAFETY PRECAUTIONS

**PROTECTION CLASS 1 - FIXTURE MUST BE PROPERLY GROUNDED.**

**THERE ARE NO USER SERVICEABLE PARTS INSIDE THIS UNIT. DO NOT ATTEMPT ANY REPAIRS YOURSELF, AS DOING SO WILL VOID YOUR MANUFACTURER'S WARRANTY. DAMAGES RESULTING FROM MODIFICATIONS TO THIS FIXTURE AND/OR THE DISREGARD OF SAFETY INSTRUCTIONS AND GUIDELINES IN THIS MANUAL VOID THE MANUFACTURER'S WARRANTY AND ARE NOT SUBJECT TO ANY WARRANTY CLAIMS AND/OR REPAIRS.**

**NEVER LOOK DIRECTLY INTO THE LIGHT SOURCE!  
RETINA INJURY RISK - MAY INDUCE BLINDNESS!  
SENSITIVE PERSONS MAY SUFFER AN EPILEPTIC SHOCK!**

- **Ambient operating temperature range is -4°F to 113°F (-20°C to 45°C)!**
- DO NOT TOUCH the fixture housing during operation. Disconnect the power and allow approximately 15 minutes for the fixture to cool down before servicing.
- DO NOT shake the fixture, and avoid brute force when installing and/or operating the fixture.
- DO NOT operate the fixture if the power cord has become frayed, crimped and/or damaged. If the power cord is damaged, replace immediately with a new one of the same power rating.
- DO NOT attempt to remove or break off the ground prong from the electrical cord. This prong is used to reduce the risk of electrical shock and fire in case of an internal short.
- DO NOT attempt to operate this unit if it has been damaged in any way.
- Disconnect from main power before making any type of connection.
- DO NOT block any air ventilation slots. All fan and air inlets must remain clean and never blocked. Allow approx. 6" (15cm) between fixture and other devices or a wall for proper cooling.
- Always be sure to mount this unit in an area that will allow proper ventilation. Allow about 6" (15cm) between this device and a wall.
- DO NOT remove the cover for any reason.
- When installing fixture in a suspended environment, always use mounting hardware that is no less than M10 x 25mm, and always install fixture with an appropriately rated safety cable.
- Never plug this unit in to a dimmer pack.
- During long periods of non-use, disconnect the unit's main power.
- Always mount this unit in safe and stable matter.
- Power-supply cords should be routed so that they are not likely to be walked on or pinched by items placed upon or against them, paying particular attention to the point where they exit from the unit.
- Cleaning - The fixture should be cleaned only as recommended by the manufacturer.
- Heat - The appliance should be situated away from heat sources such as radiators, heat registers, stoves, or other appliances (including amplifiers) that produce heat.
- The fixture should be serviced by qualified service personnel when:
  - A. The power-supply cord or the plug have been damaged.
  - B. Objects have fallen onto, or liquids have been spilled into, the fixture.
  - C. The fixture does not appear to operate normally or exhibits a marked change in performance.
  - D. The fixture has fallen and/or has been subjected to extreme handling.

# OVERVIEW

# INSTALLATION GUIDELINES

**DO NOT INSTALL THE FIXTURE IF YOU ARE NOT QUALIFIED TO DO SO!**

Fixture **MUST** be installed following all local, national, and country commercial electrical and construction codes and regulations.

When installing the unit, the trussing or area of installation must be able to hold 10 times the weight of the unit and any attached accessories without any deformation. The unit must be secured with a secondary safety attachment, e.g. an appropriately-rated safety cable.

Before rigging/mounting a single fixture to any metal truss/structure or placing the fixture(s) on any surface, a professional equipment installer **MUST** be consulted to determine if the metal truss/structure or surface is properly certified to safely hold the combined weight of the fixture(s), clamps, cables, and accessories.

Ambient operating temperature range is -4°F to 113°F (-20°C to 45°C). Do not operate this device when ambient temperature falls outside this range!

Fixture(s) should be installed away from walking paths, seating areas, or areas where unauthorized personnel might reach the fixture by hand.

**NEVER** stand directly below the fixture(s) when rigging, removing, or servicing.

Overhead fixture installation must always be secured with a secondary safety attachment, such as an appropriately rated safety cable that can hold 10 times the weight of the fixture.

Overhead mounting requires extensive experience, including calculating working load limits, knowledge of installation material being used, and periodic safety inspection of all installation material as well as the unit itself. If you lack these qualifications, do not attempt the installation yourself.

The installation should be checked by a skilled person once a year.

# INSTALLATION GUIDELINES

## CLAMP MOUNTING

When mounting the fixture to a truss or any other suspended structure, be sure to secure an appropriately rated clamp to the hole on the top of each mounting bracket. Insert a bolt of appropriate size through the bottom of the mounting clamp and the hole on the mounting bracket, and secure them together with a matching nut. Additionally, a safety cable of the appropriate weight rating should be secured through the each safety cable loop on the rear panel of the fixture.

### SAFETY CABLE:

**ALWAYS ATTACH A SAFETY CABLE WHENEVER INSTALLING THIS FIXTURE IN A SUSPENDED ENVIRONMENT TO ENSURE THAT THE FIXTURE WILL NOT FALL IF THE CLAMP FAILS.**

# INSTALLATION GUIDELINES

The unit is fully operational in three different mounting positions: hanging upside-down from the ceiling or trussing, sideways on trussing, or set on a flat level surface. Be sure this fixture is kept at least 2m (6.5 ft) away from any flammable materials (decorations, etc). Always use and install a safety cable (not included) as a safety measure to prevent accidental damage and/or injury in the event the clamp fails. Never use the carrying handles for secondary attachment.

**FALLING FIXTURES CAN CAUSE SEVERE INJURY OR SERIOUS EQUIPMENT DAMAGE! FOR THIS REASON, FIXTURES SHOULD BE INSTALLED AND INSPECTED ONLY BY QUALIFIED PERSONNEL. DO NOT INSTALL THE UNIT IF YOU LACK THE QUALIFICATIONS TO DO SO, OR IF YOU HAVE DOUBTS ABOUT THE SAFETY AND SECURITY OF THE INSTALLATION SETUP OR LOCATION!**

**ALWAYS ATTACH A SAFETY CABLE WHENEVER INSTALLING THIS FIXTURE IN A SUSPENDED ENVIRONMENT TO ENSURE THAT THE FIXTURE WILL NOT FALL IF THE CLAMP FAILS.**

# LENS REPLACEMENT

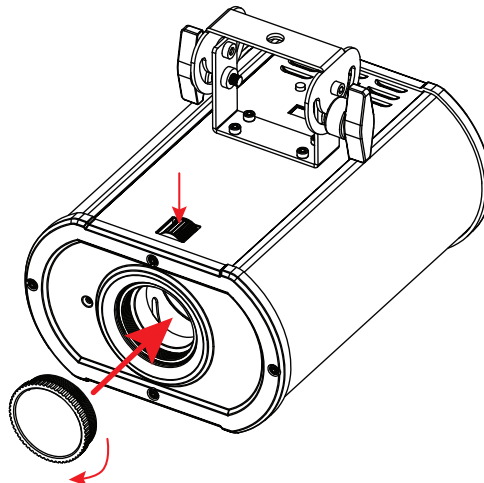

1. Hold the focus adjustment knob in place. Grip the lens assembly directly and rotate counter-clockwise to unscrew the lens assembly from the main unit.

2. Remove the retainer clip from the lens assembly, then remove the lens itself.

3. Replace the lens and reinstall the retainer clip to secure the lens in place. Reinstall the lens assembly in the unit by inserting the lens assembly back into the front of the unit and rotating the lens assembly clockwise while holding down the focus adjustment knob.

# CONTROL PANEL

This unit features a display screen with a 4-button control pad, which can be used to easily adjust any device settings.

Pressing the MODE button will cycle through the various Main Menu options. When the desired Main Menu option is displayed on the screen, press the SETUP button to enter the sub-menu, then use the UP and DOWN buttons to scroll through sub-menu options. In some cases, there will be a second sub-menu that can be navigated in the same way.

## SCREEN LOCK

The control panel screen will lock after a period of inactivity, which is set to 30 seconds by default. This setting can be changed by navigating to Personality > Display > Touch Screen Lock in the system menu. To unlock the screen, press and hold any spot on the display screen until the screen unlocks.

# UC IR REMOTE

This unit can be operated using the ADJ UC IR remote control. **The unit can only be controlled when it has been set to Primary mode. The unit will NOT respond to commands when it has been set to Secondary mode.** When using the UC IR to control multiple units that are operating in primary/secondary mode, follow these steps to set up the units:

1. Power on the unit, and press MODE to scroll to the “Personality” menu, then press SETUP.
2. Use the UP and DOWN buttons to scroll to “Primary/Secondary Mode”. Press SETUP, then use the UP and DOWN buttons set the device to “Primary”. The unit will NOT respond to IR remote commands when it has been set to “Secondary” mode.
3. Press SETUP to confirm and return to the “Personality” menu.
4. Use UP and DOWN to scroll to “IR Remote” and press SETUP.
5. Use the UP and DOWN buttons to scroll to “ON”, then press SETUP to confirm.

## CONTROLS

- STAND BY - Press to black out the fixture. Press again to return to the initial state.
- FULL ON - Press to fully illuminate the unit.
- FADE/GOBO - Press to put the unit in Color Fade mode
- “DIMMER +” and “DIMMER -” - Use the buttons to adjust the output intensity when color mode is active.
- STROBE - Press this button for strobing, then use buttons 1 - 4 to select the strobe speed. 1 is the slowest and 4 is the fastest.
- COLOR - Press to put the unit in color mode.
- 1 - 9 BUTTONS - Use to select strobe speed or show mode.
- SOUND ON & OFF - These buttons have no defined function for this unit.
- SHOW 0 - Press this button to select Show mode. Then use buttons 1-3 to select Shows 1-3.

# DMX SETUP

**DMX-512 OVERVIEW:** DMX-512, or Digital Multiplex, is a universal protocol for communication between intelligent lighting fixtures and controllers. A DMX-512 controller sends serial data instructions to fixtures via 5-pin or 3-pin XLR connectors. Fixtures feature DATA IN and DATA OUT terminals for daisy-chaining, while most controllers have only a DATA OUT terminal.

**DMX LINKING:** DMX-512 enables fixtures from different manufacturers to be linked and controlled by a single DMX-compliant controller. For reliable data transmission, use the shortest cable path possible when connecting multiple fixtures. DMX addressing is independent of fixture position in the chain, so a fixture set to DMX address 1 can be placed anywhere—at the beginning, middle, or end—and the controller will send address 1 data to it. For long cable runs exceeding 500m (1640ft) or chains with many fixtures, use a 120-ohm terminator on the last fixture's DATA OUT to prevent signal issues.

**DMX CABLE REQUIREMENTS:** The PC415X supports DMX-512 control, with the DMX address set on the rear panel. Use approved DMX-512 cables with 5-pin XLR (standard) or 3-pin XLR (some setups) connectors, featuring male XLR for DATA OUT and female XLR for DATA IN. The cable must be 110-120 Ohm shielded, such as Accu-Cable DMX cables, available at professional lighting retailers. For custom cables, connect Pin 1 (shield), Pin 2 (DMX-), and Pin 3 (DMX+), leaving Pins 4 and 5 unused in 5-pin setups, and ensure the shield does not contact the XLR's ground lug or casing to avoid short circuits. Cables must be daisy-chained from fixture to fixture, cannot be split, and should not exceed a total length of 500m (1640ft).

**NOTICE:** Grounding the cable shield can cause short circuits. Ensure the shield conductor does not contact the XLR's outer casing or ground lug to prevent erratic behavior.

# DMX SETUP

**Special Note: Line Termination.** When longer runs of cable are used, you may need to use a terminator on the last unit to avoid erratic behavior. A terminator is a 110-120 ohm 1/4 watt resistor which is connected between pins 2 and 3 of a male XLR connector (DATA + and DATA -). This unit is inserted in the female XLR connector of the last unit in your daisy chain to terminate the line. Using a cable terminator (ADJ part number Z-DMX/T) will reduce the risk of erratic behavior.

A DMX512 terminator reduces signal errors, avoiding most signal reflection interference. Connect PIN 2 (DMX-) and PIN 3 (DMX+) of the last fixture in series with a 120 Ohm, 1/4 W Resistor to terminate the DMX512.

## DMX ADDRESSING.

All fixtures should be given a DMX starting address when using a DMX controller, so the correct fixture responds to the correct control signal. This digital starting address is the channel number from which the fixture starts to “listen” to the digital control signal sent out from the DMX controller. The assignment of this starting DMX address is achieved by setting the correct DMX address on the digital control display on the fixture.

You can set the same starting address for all fixtures or a group of fixtures, or set different addresses for each individual fixture. Setting all fixtures to the same DMX address will cause all fixtures to react in the same way. In other words, changing the settings of one channel will affect all the fixtures simultaneously.

If you set each fixture to a different DMX address, each unit will start to “listen” to the channel number you have set, based on the quantity of DMX channels of each fixture. That means changing the settings of one channel will only affect the selected fixture.

For example, when this unit is operating in 4 channel mode, you should set the starting DMX address of the first unit to 1, the second unit to 5 (1 + 4), the third unit to 9 (1 + 4 + 4), and so on. See the chart below for more details.

CHANNEL MODE	UNIT 1 ADDRESS	UNIT 2 ADDRESS	UNIT 3 ADDRESS	UNIT 4 ADDRESS
4 Ch	1	5	9	13
9 Ch	1	10	19	28

# PRIMARY-SECONDARY SETUP

This function allows you to link units together to run in a Primary-Secondary set-up, in which one unit will act as the controlling unit and the others will react to the controlling unit's built-in programs. Any unit can be configured to act as a Primary or as a Secondary, but only one unit in a given system can be programmed to act as the Primary.

## Primary-Secondary Connections and Settings:

1. Daisy chain your units via the XLR connectors on the bottom of each unit. Use standard XLR data cables to link your units together. Remember that the male XLR connector is the input and the female XLR connector is the output. The first unit in the chain (primary) will use the female XLR connector only. The last unit in the chain will use the male XLR connector only.
2. On the unit that you want to designate as the primary, use the display screen and control panel to navigate to Personality > Primary/Secondary Mode, then select "Primary" and press the SETUP button to confirm. Configure the operation of the device as desired.
3. On the units that you want to designate as secondaries, use the display screen and control panel to navigate to Personality > Primary/Secondary Mode, then select "Secondary" and press the SETUP button to confirm. The secondary units will now follow the operation of the primary unit.

## NOTES:

- Only one unit should be configured as the primary, while all the other units should be configured as secondaries.
- All units should be set to the same DMX channel mode.
- If fixtures fail to sync, verify that all settings mentioned above are the same, then power all devices off, then switch them on again to re-establish the link.

# MULTI-UNIT POWER LINKING

This feature allows you to connect the fixtures to one another using the power cable input and output sockets.

**The maximum number of units that can be linked in this manner is as follows:**

- 8 units when running on 120V power.
- 16 units when running on 230V power.

**DO NOT EXCEED THIS MAXIMUM NUMBER WHEN POWER LINKING UNITS!**

All linked units must be of the same make and model type. Do not mix and match units!

# MAINTENANCE GUIDELINES

**DISCONNECT POWER BEFORE PERFORMING ANY MAINTENANCE**

## **CLEANING**

Frequent cleaning is recommended to ensure proper function, optimized light output, and an extended life. The frequency of cleaning depends on the environment in which the fixture operates: damp, smoky, or particularly dirty environments can cause greater accumulation of dirt on the fixture's optics. Clean the external lens surface regularly with a soft cloth to avoid dirt/debris accumulation.

**NEVER** use alcohol, solvents, or ammonia-based cleaners.

## **MAINTENANCE**

Regular inspections are recommended to ensure proper function and extended life. There are no user serviceable parts inside this fixture. Please refer all other service issues to an authorized ADJ service technician. Should you need any spare parts, please order genuine parts from your local ADJ dealer.

Please refer to the following points during routine inspections:

- A. A detailed electrical check by an approved electrical engineer every three months, to make sure the circuit contacts are in good condition and prevent overheating.
- B. Be sure all screws and fasteners are securely tightened at all times. Loose screws may fall out during normal operation, resulting in damage or injury as larger parts could fall.
- C. Check for any deformations on the housing, color lenses, rigging hardware, and rigging points (ceiling, suspension, trussing). Deformations in the housing could allow for dust to enter into the fixture. Damaged rigging points or unsecured rigging could cause the fixture to fall and seriously injure a person(s).
- D. Electric power supply cables must not show any damage, material fatigue, or sediments.

**NEVER** remove the ground prong from the power cable.

- Bright, 120W Cool White LED
- Color Temperature: 7000K
- 50,000 Hour Average LED Life

## Features:

- Color Wheel with 5 Dichroic Colors Plus White
- 27° Beam Angle (37° Optical Lens included in the box for wider throw applications)
- Manual Focus of Lens for Blurry Effects
- 0.6Hz to 7.5Hz Strobe Rate
- 3 Built-In Programs
- Primary / Secondary Mode
- Fan Cooled

## Control:

- Control Protocol: DMX and IR Remote
- 2 DMX Modes: 4 and 9 channel modes
- Dim Modes: 6 Presets (Standard, Stage, TV, Architectural, Theatre & Stage 2)
- Dim Curves: 4 Presets (Linear, Square Law, Inv. Square Law and S Curve)
- 0-100% Smooth Dimming
- Variable, Pulse & Random Strobe Modes
- Max Strobe Rate 7.5Hz. Min Strobe Rate: 0.6Hz.
- With Wired Digital Communication Network
- Display: OLED display with 4-button touch menu

## Connections:

- Data: IP20 Indoor locking 5-pin DMX In/Out
- Power: IP20 Indoor locking power In/Out
- Safety Loop

## Electrical:

- 100-240V 50Hz/60Hz., Auto Sensing, Power Input
- Power Out to link multiple like units
- Max Power Consumption: 128W @120V., 125W @220V.
- Max Power Link: 8pcs @120V., 16pcs @220V.
- Fuse Protected: T5A/250V Glass Fuse (5\*20MM)

## Dimensions / Weight:

- Length: 12.4" (315mm)
- Width: 9.1" (231mm)
- Height: 9.2" (234mm)
- Weight: 11.02 lbs. (5 kg)

## What's Included:

- 1x 6ft (1.83m), 3x18AWG, Indoor Power locking to Edison power cable (U.S.)
- 27° Optical Lens
- 37° Optical Lens
- 1x UC-IR (IR Remote)
- Safety Cable

## Approvals and Ratings:

- CE, cETLus (#5014475), FCC, IP20

## FCC STATEMENT

Please note that changes or modifications to this product that are not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

**NOTE:** This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expense.
